

**Fungicide Resistance Management Strategies**  
**Developed by the CropLife Australia Fungicide Resistance Management Review Group**  
Valid as at 25 June 2015

**Crop(s):** Tomato

**Pest(s):** Grey Mould

Resistance Management Strategy for:

**Group 2** (Dicarboximide) fungicides; and  
**Group 7** SDHI (Succinate dehydrogenase inhibitors)

1. Tank mix **Group 2** fungicides with a protectant such as chlorothalonil.  
Avoid applying two **Group 2** fungicides in succession, unless tank mixed with a protectant.
2. **DO NOT** apply more than four **Group 2** sprays in a season.
3. If applying **Group 7** fungicides, **DO NOT** apply more than two consecutive sprays before changing to another group. **DO NOT** apply more than three **Group 7** sprays per season. If consecutive sprays are used, then use the same number of sprays of an alternative group before using another **Group 7**, including sprays in consecutive seasons.
