

Fungicide Resistance Management Strategies
Developed by the CropLife Australia Fungicide Resistance Management Review Group
Valid as at 10 June 2016

Crop(s): Tomato

Pest(s): Grey Mould

Resistance Management Strategy for:

Group 2 (Dicarboximide) fungicides; and
Group 7 SDHI (Succinate dehydrogenase inhibitors)

1. Tank mix **Group 2** fungicides with a protectant such as chlorothalonil. Avoid applying two **Group 2** fungicides in succession, unless tank mixed with a protectant.
2. **DO NOT** apply more than four **Group 2** sprays in a season.
3. If applying **Group 7** fungicides, **DO NOT** apply more than two consecutive sprays before changing to another group. **DO NOT** apply more than three **Group 7** sprays per season. If consecutive sprays are used, then use the same number of sprays of an alternative group before using another **Group 7**, including sprays in consecutive seasons.
