

Fungicide Resistance Management Strategies
Developed by the CropLife Australia Fungicide Resistance Management Review Group
 Valid as at 7 June 2017

Crop(s): Peanut

Pest(s): Leaf Spots, Rust, Net Blotch

Resistance Management Strategy for:

Group 3 (DMI); and
Group 11 (Quinone outside Inhibitor) fungicides

1. **DO NOT** apply more than three consecutive **Group 3** sprays alone, before changing to a fungicide of a different activity group.

Apply a maximum of five **Group 3** sprays per season.

2. **DO NOT** apply **Group 11** products as more than 50% of the total number of sprays in any one season, up to a maximum of three sprays of **Group 11**.

DO NOT apply more than two consecutive applications of a **Group 11** spray.

If two consecutive applications of a **Group 11** spray are applied, they must be followed by at least the same number of sprays from an alternative chemical group.
