

THE NEXT-GENERATION MOBILE APP

If you farm or keep bees...
you need to BeeConnected.

Log location

Log your property or hive using smart GPS technology and broadcast to others in the area.

Register activities

Easily log beekeeping or crop protection activities and if they happen in the same vicinity, you will be notified.

Collaborate and coordinate

Communicate securely to coordinate spray activities and hive placements for optimal pollination.

Supporting pollinator protection

BeeConnected is an international award winning free app that allows farmers and beekeepers to communicate and coordinate to protect managed honey bees from farm spray activities.

With collaboration comes power

Thanks to good farming practices and collective efforts, Australian honey bee numbers are well positioned as the industry faces its biggest threat yet. Which is why it's essential that everyone assists in keeping it that way.

The relaunched BeeConnected app is an important decision-making tool for best-practice product application and pollinator protection. Using precise GPS capabilities, BeeConnected allows farmers and beekeepers to coordinate activities for optimal pollination.
